ABOUT ME

I'm a Computer Engineer graduate. I have the necessary skills to structure and document web development projects that I can work both as a part of a team or leading it. I specialize in the creation of e-commerce; from the set up of Google My Business to following advertising campaigns for different clients. I like to keep my mind focused on solving the task at hand while also attending other projects throughout the day. I take importance to details that can make a difference, always considering delivery times.

Currently I am looking to deepen my knowledge on the UI and UX field.

I'm 24 years old.

LANGUAGES

Spanish (Native) 100%

English 80%
